MODULAR PACKAGING LINES - EMBATHERM

Your machinery «à la carte».

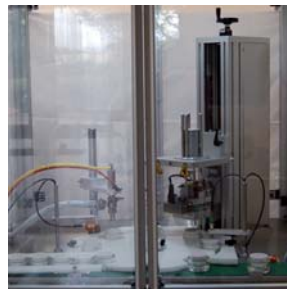

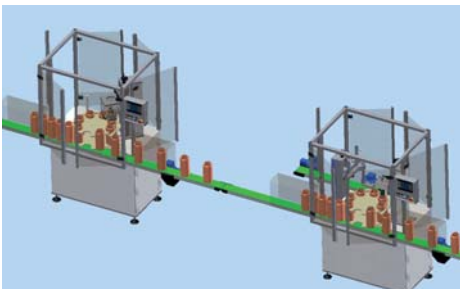

EMBATHERM, manufacturers of machinery for more 25 years, now makes its automatic machines range standard, with offering a primary packaging line «à la carte», for cosmetics and pharmaceutical applications.

Made up of standard EMBATHERM modules, the line is composed according to the customer's needs : filling and/or sealing unit (based on TCE160 - 1 single station for taking, placing and sealing the lids), unit for caps distribution and screwing or only screwing (based on VE160A – with programmable torque), hand or automatic caps feeding, incorporation of a marking unit, etc.

The line is designed according to the customer's wishes, each unit is stand-alone and the line can evolve later with adding another unit.

You are facing some productions that are more and more diverse (size and shape of jars, bulks, etc), with very different sizes of batch : you need packaging line capable of ensuring the main functions (filling, sealing, capping, marking, etc...) while remaining easily versatile. In the meantime, the market remains unpredictable : you are looking for equipments with controlled budgets and improving your productivity.

Our modular line fulfill these requirements : the «à la carte» definition of the line allows to start with a filling + sealing unit to complete it later with additional modules.

The shifts between formats are simple to give more flexibility for small scale productions and the speed 20/25 operations/min allow to work on bigger production worry-free.

Please, get in touch with us to define your solution.

Solutions to your sealing projects :
lids - sealers - sub-contracting
